

CS 5630 / 6630 Project Feedback

For the peer feedback activity we meet the team of **Greeshma Mahadeva Prasad and Tanvi Gangadhar**

Feedback:

1. Overall the group provided us positive feedback regarding our innovative choice of visualizing languages of the world and the scope of the project.
2. They felt that we have outlined the details of the plan well and the project objectives were clear.
3. The group felt that the visualization would be able to handle larger datasets as the restriction on the size of dataset is not seen anywhere in the planned implementation. As long as the format is followed, the visualization should be able to handle larger but similar datasets.
4. The group felt we used appropriate channels of visual encoding.
5. The group felt the visual variables chosen were appropriate. For the visualization of the heatmaps they suggested we look into the dataset to find out whether studying the grammar rules for family of languages or for countries would result in interesting and better observation.
6. For the map view, they suggested having an option using which we can plot the data points from all the categories at the same time as a way to compare all the categories at once.
7. For the map view, they also suggested we should think of adding an information box for the selected country on the map.
8. The group suggested us to have a landing page which has three buttons, linking to the first visualizations and the project details.

Actions:

1. We have included the landing page for the website.
2. For the heatmap, we plan to look into both the trends of countries and language families and the map which shows interesting patterns will be included in the visualization.
3. We plan to include the info box suggested by them for the map view.

For the TA feedback activity we meet **Jennifer Rogers** (9th Nov 2018)

Feedback:

1. Jennifer suggested that instead of having two separate HTML pages for the visualization we condense the two into one so that we can use the map view more efficiently and the complexity of navigation would be reduced.
2. The rough layout of the design changes she suggested are as follows.

Actions:

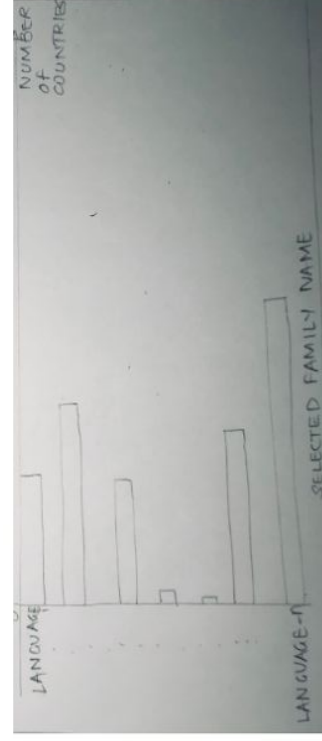

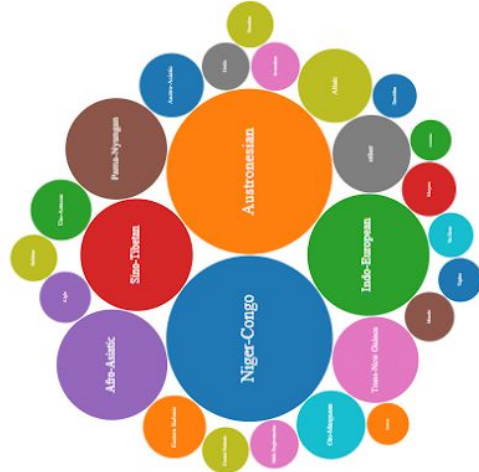

1. We intend to inculcate the changes mentioned by Jennifer in the next release of the project.
